

C O N C L U S I O N

Over the years many innovations to traditional paint and coatings formulations have been introduced. UV Coatings Ltd. has taken up where current technology has left off, creating a new, advanced generation of coatings products. We have integrated the best that the industry presently offers (chemical and abrasion resistance, durability, and superior finish and appearance) with our own advanced technology. The coatings industry now has a product that not only provides the excellent properties of current technology, but also one that is a UV-cured, 100% solids liquid coating that offers extremely quick drying time and no hazardous VOC pollutants.

Overall, Z-VOC paints and coatings offer the broadest benefits available in today's industrial coatings market. Our technology guarantees our customers major savings in production and insurance costs and significant savings in time, energy usage, and storage space. These advantages, plus the complete elimination of environmental and health hazards related to VOC emissions, bring the "someday" of coatings to TODAY.
